SHUBHAM KUMAR

shubhamkumar200334@gmail.com|+919818281820|LinkedIn|Github|GFG|Leetcode

Education

Maharaja Agrasen Institute of Technology – BTech in Information Technology (2021 – 2025)
Gandhi Harizan CO-ED Govt SSS – Class 12th (2019 – 2021)
Canterbury Public School Delhi – Class 10th (2018 – 2019)

Skills

Programming – **C/C++ (500+ DSA solved)|C# (.NET)|JavaScript|Python|Java**
Database – **MySql|SqlServer|MongoDb**
Technology/Frameworks **– HTML/CSS/JS|MERN stack|ASP.NET/C#|Django**
Tools **– Postman|Google Cloud|Git|Github|Docker|Firebase|Jupyter Notebook**
Computer Fundamentals – **OOP|DBMS|Computer Networks|Operating System|Clean Code**

Full-Time Experience

-Cognizant Technology Solution (Nov 2025 – Present)

1. Worked on the **CHUBB Insurance domain** in a **Production Support role**, utilizing **C#, SQL Server, ServiceNow**, and **enterprise tools** to analyze issues, understand complex codebases, and deliver **production-ready fixes**.
2. Successfully resolved **40+ tickets** involving **bug fixing, data corrections, and logic enhancements**, ensuring **data integrity** by validating **SQL scripts across Dev, Stage, and Production environments**.
3. Designed and developed **C# console-based automation tools** to streamline **data extraction, transformation, and reporting**, reducing **manual effort** and improving turnaround time by **~15–20 minutes per ticket**.
4. Applied advanced concepts such as **Multithreading, File Handling, and Process Execution in C#** to build **scalable, performance-optimized automation solutions**.
5. Built **modular and reusable utilities** with **configurable presets (server, database, tables)** and implemented **caching mechanisms** to efficiently manage **multi-environment workflows**, while strengthening **DSA and modern .NET practices**.

Internship Experience

-Cognizant Technology Solutions (Internship) (May 2025 – Sep 2025)

1. Completed a **4-month Internship in Full-Stack Development**, working with **C# .NET, HTML, CSS, JavaScript, Bootstrap, Python, Linux, and SQL Server**.
2. Developed a **Full-Stack Web Application – "Virtual Art Gallery"**, integrating **Cloudinary (file storage), JWT authentication, email services**, and **secure file management systems**.
3. Led **Backend Development**, implementing **secure authentication and Role-Based Authorization** using **JWT (Access & Refresh Tokens) with Cookies**.
4. Contributed to **Frontend Development**, building **API Interceptors for token renewal** and ensuring **scalable, maintainable architecture** by following **Clean Code practices**.

-**Avijo Health Care (Avijo, AvijoExpert, AvijoAlpha, AvijoJobs, AvijoAdmin) (Feb 2025 – May 2025)**

1. Contributed to building **MERN stack applications (MongoDB, Express.js, React.js, Node.js)** in a startup environment, owning **system design, frontend, backend, and deployment** from early-stage development to MVP readiness.
2. Developed scalable frontend architecture using **React.js**, implementing **dynamic forms, reusable components, rich text editor integration**, and improving performance via **client-side caching strategies**.
3. Implemented **global state management using Redux**, including **API interceptors and structured state handling**, enabling scalable and maintainable frontend systems.
4. Designed and integrated **secure authentication systems** using **JWT (access & refresh tokens), cookies, OTP (Twilio), and OAuth (Google, Facebook)** with a focus on **cost optimization for MVP stage**.

5. Engineered **100+ RESTful APIs** using **Node.js & Express**, covering **business logic, middleware, validation (Joi), file handling (Multer), and third-party integrations** including **Google Maps APIs**.
6. Led integration of complex **Government Healthcare APIs (ABDM/ABHA/HPR/HFR)**, working with **limited documentation and evolving standards**, redesigning **database schemas and backend workflows** to ensure compliance, reliability, and seamless data exchange across systems.
7. Redesigned and managed **MongoDB database architecture**, creating **ER diagrams, scalable schemas, and handling data migration & multi-database management** using **MongoDB Atlas**.
8. Mentored and guided **6 interns**, while contributing to infrastructure migration from **Railway/Vercel to Google Cloud (App Engine, Cloud Build, Docker)**, gaining hands-on experience in **DevOps and CI/CD pipelines**.

-India Today Group **(March 2024 – Jun 2024)**
1. Mentored under a **Senior Software Developer (15+ years experience)**, gaining strong understanding of **software development mindset, scalable system design, and problem-solving approaches**.
2. Trained through **real-world case studies and production-level issues**, analyzing **root causes and proposing effective solutions** to improve system reliability.
3. Gained exposure to **modern tech stack including React, Python (Django), DynamoDB, and AWS**, understanding **end-to-end development and deployment workflows**.
4, Built a **full-stack MERN application (MongoDB, Express.js, React.js, Node.js)**, applying **clean coding practices, modular architecture, and scalability principles**, while increasing project complexity to deepen practical knowledge.

Project

-Study Notion (Github, Live) **(3 Months)**
1. Built **"Study Notion" – a Full-Stack MERN application (MongoDB, Express.js, React.js, Node.js)** for **students and educators**, enabling **course creation, management, and secure purchasing** with **Razorpay integration and JWT-based authentication (cookies)**.
2. Performed thorough **API testing using Postman**, deployed the application on **Vercel**, and followed **clean code principles, modular architecture, and best practices** to ensure **scalability and maintainability**.

-Online App Store (Github, Live) **(2 Months)**
1. Built an **Online App Store – Full-Stack MERN application (MongoDB, Express.js, React.js, Node.js)**, enabling **app upload, management, and distribution**, developed as a **college project with advanced feature exploration**.
2. Implemented **file storage using Google Drive APIs**, managed **media uploads via Cloudinary**, and integrated **secure authentication using JWT with cookies**, while exploring new technologies and real-world integrations.

-Chatting App (Github, Live) **(1 Months)**
1. Built a **Real-Time Chat Application using MERN Stack (MongoDB, Express.js, React.js, Node.js)**, enabling **messaging, voice calls, and video calls** with integration of **Stream (Streamify) APIs** for enhanced communication features.
2. Implemented advanced **authentication using JWT (Access & Refresh Tokens)** and managed application state with **Redux**, ensuring **secure, scalable, and real-time user experience**.

Books

Python by Sumitra Arora, Programming in C by Reema Thareja, OOP with C++ by E. Balagurusamy, Eloquent JavaScript by Marijn Haverbek, Pro.CSharp.10.with.NET.6 by Andrew Troelsen Phil Japikse Apress
Still reading – Clean Code by Robert C Martin

Certification

- Web developement in MERN From CodeHelp
- Data structure in cpp by love Babbar from CodeHelp
- Designing Relationship between collection in MongoDb from MongoUniversity
- C# WebApi for backend from udemy by Sameer Saini
